User Scenario

Jimmy, a young 22-year old student landed a new entry level front-end web developer job. However, on the job listing, one of the requirements was to have experience in Photoshop. Jimmy was tired of getting rejected and in a desperate feat, lied on his resume. Unfortunately for him, his first assignment is Photoshop intensive. His boss wants him to recreate a crudely hand-drawn logo in Photoshop. Jimmy now has a desperate need to learn Photoshop as soon as possible but doesn't know where to begin. Jimmy contacts his friend who is experienced in graphic design, and his friend recommends a new website that gives him a crash course on the basics of Photoshop. Jimmy opens up Photoshop as well as the website. Looking at the confusing interface of Photoshop, he immediately references the website. Our website shows him how to open up the file with his desired image. The website also gives him a crash course on the tools and hidden tools that photoshop provides. Jimmy loves the website, because of its easy-to-follow gifs and basic explanations. Feeling confident, Jimmy finishes his assignment in a timely manner and can now say that he has a working knowledge of Photoshop.
